OnlyFast x FloRacing

Tulsa Shootout + Chili Bowl | Follow-up call brief | October 13, 2026

Call objective: Get an itemized proposal for promoting OnlyFast around both events, with a measurable path to racer sign-ups. Confirm the intended event editions and dates.

Introduction to use on the call

OnlyFast builds a race setup and race-weekend management app for drivers, crews, and teams. Racers can record class-specific chassis settings, track conditions, and session changes; save race weekends; review timing screenshots; and use handling feedback with AI Setup Assist. The app also includes race scheduling, to-do lists, parts references, and plan-dependent setup comparison, sharing, and PDF export. Rookie is free; current onboarding marks Pro and Teams as coming soon while preserving existing paid access.

Audience fit and OnlyFast placements

Product fit, not measured reach: The current code includes dirt oval classes such as Midgets, Non-Wing Sprint Cars, and Lightning Sprints, plus other racing disciplines. No dedicated micro-sprint sheet was found. Driver/crew relevance is a positioning hypothesis; event-viewer overlap needs Flo's evidence.

Implemented placement contexts: Home middle/bottom; saved setups; below track conditions, timing scan/results, and session tools; parts reference, schedule, and to-do pages; plus a dismissible message after a successful manual setup save. These currently display animated OnlyFast Pro-upgrade house ads. They could inform a future partner discussion but are not verified sellable sponsor inventory.

Eligibility and readiness: Ads require a signed-in, effective Rookie account; paid, admin, and promo-unlocked accounts are excluded. The Median iOS wrapper suppresses house-ad content. AdSense slot IDs remain placeholders, and its component is not wired into these current placements. Findings reflect local code, including uncommitted changes, rather than verified production delivery.

Questions for FloRacing

1. **Packages:** What is available for each event and a combined buy: live-stream spots, host reads, overlays, replay placements, event-page display, email, or social? Which sessions/devices are included? Are category exclusivity and smaller test packages available?
2. **Rates and delivery:** Can you quote each option with CPM or flat-fee basis, minimum spend, guaranteed impressions/reads, production fees, bundle discounts, payment terms, and makegoods for underdelivery or schedule changes?
3. **Audience and targeting:** What are the latest event-specific unique viewers, impressions, geography, device mix, and repeat-viewing rates, with dates and definitions? Can you distinguish racers/crew from general fans, target by event/geography/interest, cap frequency, and deduplicate reach across both events?
4. **Timing and creative:** What are the booking, asset, and approval deadlines; exact flight dates; and availability for lead-up, preliminary nights, finals, and replays? What video lengths, dimensions, audio rules, links/QR codes, and creative rotation are supported?
5. **Performance:** Will reports break out spend, delivery, unique reach, frequency, video completion, and clicks/CTR by event, placement, day, and device? Can we use UTMs, a QR code, or an event offer to attribute sign-ups? What attribution windows, reporting cadence, exports, and conversion integrations are available?

OnlyFast metrics to verify internally: What are our active users, geography/class mix, Rookie share, sessions/pageviews, available ad impressions, and sign-up conversion baseline? No verified audience or traffic totals were available in the inspected project.

Leave with: An itemized proposal, inventory/spec sheet, dated audience evidence, reporting sample, and agreed next step with an owner and deadline.

Code basis: active entry index.html -> src/main.tsx; src/components/{SetupDashboard,OnboardingFlow,PlanSelection,RookieAdSlot,RookieHouseAdContent}.tsx; src/lib/{ads,classConfigs,setupLibraryAccess}.ts. Review date: October 13, 2026. Backend-dependent features were inspected in code, not exercised live.
